Delivering what matters

Thermo King T-Series is a complete range of self-powered temperature control units for 12' - 28' straight trucks hauling fresh or frozen loads. The units are available in single and multiple-temperature versions with either scroll or reciprocating compressors.

The T-Series delivers a lower lifecycle cost, precise temperature control, advanced fuel-saving technology and greater ease-of-use and serviceability.

Within the industry, the Thermo King T-Series units deliver unmatched performance and reliability. When compared with traditional compressors, the advanced scroll compressors from Thermo King offer a 10 percent reduction in fuel consumption with cleaner, quieter operation, less vibration and less maintenance.

The T-Series offers SmartPower™ electric standby and the EMI-2000 extended maintenance interval to help customers increase their efficiency while lessening their environmental impact.

V-Series units

Vehicle-powered truck units

Just right temperature

V-Series from Thermo King offers the optimal temperature control solution for your trucks and vans up to 29m³. High airflow in these units provides superior temperature management leading to a more uniform temperature distribution thereby protecting your perishable goods perfectly transport.

This Series comprises two-piece split units designed for fresh, frozen and deep frozen applications to best suit your needs.

The user friendly direct smart reefer offers continuous monitoring while providing three standard hourmeters to record working hours. It also provides Set-Point Limits allowing user the to select the permissible temperature range according to the application and the refrigerant.

The V-series comes with new long life fans in both the condenser and evaporator with a working life 3 times longer than previously.

Benefits

- Easy to use and service - Symbolic display on controller for easy, error-free operation.
- Low fuel consumption - Advanced fuel-saving control technology with the new TSR-2 controller means greater fuel efficiency.
- Unique Reverse Cycle operation to provide superior heating capacity and ultra-quick defrost.
- Improved reliability of electrical components - Components requiring frequent service such as fuses, fans and fan filter are easily accessible without affecting the seal of the electrical control box.
- Environmentally friendly - Units are now equipped with GreenTech engines which are the cleanest on the market, exceeding all existing EU requirements. 99.7% of the unit material is recyclable.
- Low noise - Poly-V stretch belt with Quiet Channel technology for reduced noise.
- Improved diagnostics with ServiceWatch - Better diagnostics make it easier for service technicians to understand and respond to potential problems.
- Flexibility—Units can be converted from single temperature to multi-temperature using the same condenser.
- Ease of installation - Fittings outside of the evaporator to reduce installation time and guarantee airflow.

Subject to availability of stock.
Terms of the Thermo King Express Warranty are available on request.
